Virtual Teams: a Literature Review

Nader Ale Ebrahim, Shamsuddin Ahmed and Zahari Taha

Department of Engineering Design and Manufacture, Faculty of Engineering, University of Malaya
50603, Lembah Pantai, Kuala Lumpur, Malaysia

Abstract: In the competitive market, virtual teams represent a growing response to the need for fast time-to-market, low-cost and rapid solutions to complex organizational problems. Virtual teams enable organizations to pool the talents and expertise of employees and non-employees by eliminating time and space barriers. Nowadays companies are heavily investing in virtual team to enhance their performance and competitiveness. Despite virtual team growing prevalence, relatively little is known about this new form of team. Hence the study offers an extensive literature review with definitions of virtual teams and a structured analysis of the present body of knowledge of virtual teams. First, we distinguish virtual teams from conventional teams, different types of virtual teams to identify where current knowledge applies. Second, we distinguish what is needed for effective virtual team considering the people, process and technology point of view and underlying characteristics of virtual teams and challenges the entail. Finally we have identified and extended 12 key factors that need to be considered, and describes a methodology focused on supporting virtual team working, with a new approach that has not been specifically addressed in the existing literature and some guide line for future research extracted.

Key words: *Virtual team, Literature review, Effective virtual team,*

INTRODUCTION

Research on virtual teams is still in its nascent stages (Badrinarayanan and Arnett, 2008, Prasad and Akhilesh, 2002) and because of the relative newness of virtual teams, many areas of research have not been examined (Badrinarayanan and Arnett, 2008). Camarinha-Matos and Afsarmanesh (2003) conclude that, setting-up an infrastructure for virtual team still requires a large engineering effort, which represents a major obstacle for the implantation of this new paradigm. Effective and efficient cooperation across disciplines and distributed teams becomes essential for the success of engineering projects (Zhang *et al.*, 2008). Therefore the experiments suggest that more research is needed to explore the ways to enhance the performance of virtual teams (El-Tayeh *et al.*, 2008).

Organizations are currently facing important and unprecedented challenges in an ever dynamic, constantly changing and complex environment (Rezgui, 2007). Economic activity of all types is moving in the direction of globalization (Acs and Preston, 1997). Zhouying (2005) supports, the economic and technological gap between developed and developing countries can largely be explained by the gaps in the levels of soft technology and soft environments between the two sets of countries. As a result this matter should taking into account. With the rapid development of electronic information and communication media in the last decades, distributed work has become much easier, faster and more efficient (Hertel *et al.*, 2005). Responding to the increasing de-centralization and globalization of work processes, many organizations have responded to their dynamic environments by introducing virtual teams that collaborate by communication technologies across geographical, temporal, cultural and organizational boundaries to achieve common goal in their organizations outputs. Virtual teams are growing in popularity (Cascio, 2000). Additionally, the rapid development of new communication technologies such as the internet has accelerated this trend so that today, most of the larger organization employs virtual teams to some degree (Hertel *et al.*, 2005). Information technology is providing the infrastructure necessary to support the development of new organization forms. Virtual teams represent one such organizational form, one that could revolutionize the workplace and provide organizations with unprecedented level of flexibility and responsiveness (Powell *et al.*, 2004). Virtual teams are important mechanisms for organizations seeking to leverage scarce resources across geographic and other boundaries

(Munkvold and Zigurs, 2007). Now complex products are designed much more collaboratively with the suppliers being involved in the design process. The production of a new car for example involves different companies in the supply chain acting more as partners in a joint manufacturing exercise (Anderson *et al.*, 2007). However by comparison in today's competitive global economy, organizations capable of rapidly creating virtual teams of talented people can respond quickly to changing business environments. capabilities of this type offer organizations a form of competitive advantage (Bergiel *et al.*, 2008). Virtual teams represent a large pool of new product know-how which seems to be a promising source of innovation. At present, except for open source software, little is known about how to utilize this know-how for new product development (Fuller *et al.*, 2006a).

The main sections of the paper will discuss the findings from the literature survey in a number of areas. There are sections discussing what virtual team is, definitions, types, examples, benefits and drawbacks, virtual teams and its benefits and drawbacks. Last sections provide the basis for a summing up section describing what are effective virtual team and a number of key challenges that are now faced. The next section discusses the definition of virtual team.

What Is Virtual Team?

Virtual Teams: Origins and Trends:

While work teams were used in the U.S. as early as the 1960s, the widespread use of teams and quality circles began in the Total Quality Management movement of the 1980s. In the late 1980s and early 1990s, many companies implemented self-managing or empowered work teams. To cut bureaucracy, reduce cycle time, and improve service, line-level employees took on decision-making and problem-solving responsibilities traditionally reserved for management. By the mid-1990s, increasing numbers of companies such as Goodyear, Motorola, Texas Instruments, and General Electric had begun exporting the team concept to their foreign affiliates in Asia, Europe, and Latin America to integrate global human resource practices (Kirkman *et al.*, 2001). Now, due to communication technology improvements and continued globalization, virtual teams have increased rapidly worldwide (Kirkman *et al.*, 2002). This era is growing popularity for virtual team structures in organizations (Walvoord *et al.*, 2008, Cascio, 2000). Martins *et al.* (2004) in a major review of the literature on virtual teams, conclude that 'with rare exceptions all organizational teams are virtual to some extent. We have moved away from working with people who are in our visual proximity to working with people around the globe (Johnson *et al.*, 2001).

Definition of Virtual Team:

Literature related to virtual teams revealed a lack of depth in the definitions. Although virtual teamwork is a current topic in the literature on global organizations, it has been problematic to define what 'virtual' means across multiple institutional contexts (Chudoba *et al.*, 2005). The concept of a "team" is described as a small number of people with complementary skills who are equally committed to a common purpose, goals, and working approach for which they hold themselves mutually accountable (Zenun *et al.*, 2007). It is worth mentioning that virtual teams are often formed to overcome geographical or temporal separations (Cascio and Shurygailo, 2003). Virtual teams work across boundaries of time and space by utilizing modern computer-driven technologies. The term "virtual team" is used to cover a wide range of activities and forms of technology-supported working (Anderson *et al.*, 2007). Virtual teams are comprised of members who are located in more than one physical location. This team trait has fostered extensive use of a variety of forms of computer-mediated communication that enable geographically dispersed members to coordinate their individual efforts and inputs (Peters and Manz, 2007).

Gassmann and Von Zedtwitz (2003b) defined "virtual team as a group of people and sub-teams who interact through interdependent tasks guided by common purpose and work across links strengthened by information, communication, and transport technologies. Another definition suggests that virtual teams, are distributed work teams whose members are geographically dispersed and coordinate their work predominantly with electronic information and communication technologies (e-mail, video-conferencing, telephone, etc.) (Hertel *et al.*, 2005), different authors have identified diverse. From the perspective of Leenders *et al.* (2003) virtual teams are groups of individuals collaborating in the execution of a specific project while geographically and often temporally distributed, possibly anywhere within (and beyond) their parent organization. Lurey and Raisinghani (2001) defined virtual teams - groups of people who work together although they are often dispersed across space, time, and/or organizational boundaries. Amongst the different definitions of the concept of a virtual team the following from is one of the most widely accepted: (Powell *et al.*, 2004), "we define virtual teams as groups of geographically, organizationally and/or time dispersed workers brought together by information technologies to accomplish one or more organization tasks".

The degree of geographic dispersion within a virtual team can vary widely from having one member located in a different location than the rest of the team to having each member located in a different country (Staples and Zhao, 2006). Along with Bal and Teo (2001a) it could be concluded that a team will become virtual if it meets four main common criteria and other characteristics that are summarized in Table 1. Geographically dispersed teams allow organizations to hire and retain the best people regardless of location. The temporary aspect of the team appears less emphasized (Lee-Kelley and Sankey, 2008) although (Bal and Teo, 2001a, Paul *et al.*, 2005, Wong and Burton, 2000) included temporary in virtual team definition but some authors like Gassmann and Von Zedtwitz (2003b) use may be temporary for some team members.

Table 1: Common criteria of virtual team

| Characteristics of virtual team | Descriptions | References |
|---------------------------------|---|--|
| Common criteria | Geographically dispersed (over different time zones) | (Dafulas and Macaulay, 2002, Shin, 2005, Wong and Burton, 2000, Nemiro, 2002, Peters and Manz, 2007, Lee-Kelley and Sankey, 2008) |
| | Driven by common purpose (guided by a common purpose) | (Bal and Teo, 2001a, Shin, 2005, Hertel <i>et al.</i> , 2005, Gassmann and Von Zedtwitz, 2003b, Rezgui, 2007) |
| | Enabled by communication technologies | (Bal and Teo, 2001a, Nemiro, 2002, Peters and Manz, 2007, Lee-Kelley and Sankey, 2008) |
| | Involved in cross-boundary collaboration | (Bal and Teo, 2001a, Gassmann and Von Zedtwitz, 2003b, Rezgui, 2007, Precup <i>et al.</i> , 2006) |
| Other characteristics | It is not a permanent team | (Bal and Teo, 2001a, Paul <i>et al.</i> , 2005, Wong and Burton, 2000, Cascio and Shurygailo, 2003, Leenders <i>et al.</i> , 2003) |
| | Small team size | (Bal and Teo, 2001a) |
| | Team member are knowledge workers | (Bal and Teo, 2001a, Kirkman <i>et al.</i> , 2004) |
| | Team members may belong to different companies | (Dafulas and Macaulay, 2002, Leenders <i>et al.</i> , 2003) |

A summary of the definition of virtual team may be taken as: small temporary groups of geographically, organizationally and/or time dispersed knowledge workers who coordinate their work predominantly with electronic information and communication technologies in order to accomplish one or more organization tasks.

Types of Virtual Team:

Generally, we can differentiate various forms of “virtual” work depending on the number of persons involved and the degree of interaction between them. The first is “*telework*” (telecommuting) which is done partially or completely outside of the main company workplace with the aid of information and telecommunication services.”*Virtual groups*“ exist when several teleworkers are combined and each member reports to the same manager. In contrast, a “*virtual team*” exists when the members of a virtual group interact with each other in order to accomplish common goals. Finally, “*virtual communities*” are larger entities of distributed work in which members participate via the internet, guided by common purposes, roles and norms. In contrast to virtual teams, virtual communities are not implemented within an organizational structure but are usually initiated by some of their members. Examples of virtual communities are Open Source software projects (Hertel *et al.*, 2005). Teleworking is viewed as an alternative way to organize work that involves the complete or partial use of ICT to enable workers to get access to their labor activities from different and remote locations (Martinez-Sanchez *et al.*, 2006). Telework provides cost savings to employees by eliminating time-consuming commutes to central offices and offers employees more flexibility to co-ordinate their work and family responsibilities (Johnson *et al.*, 2001). Cascio and Shurygailo (2003) have clarified the difference form of virtual team by classifying it with respect to two primary variables namely, the number of location (one or more) and the number of managers (one or more) Table 2 illustrates this graphically. Therefore there are four categories of teams:

1. Teleworkers: A single manager of a team at one location
2. Remote team: A single manager of a team distributed across multiple location
3. Matrixed teleworkers: Multiple manager of a team at one location
4. Matrixed remote teams: Multiple managers across multiple locations

Table 2: Forms of Virtual Teams (Cascio and Shurygailo, 2003)

| | | Managers | |
|-----------|----------|-------------|-----------------------|
| | | One | Multiple |
| Locations | One | Teleworkers | Matrixed Teleworkers |
| | Multiple | Remote Team | Matrixed Remote Teams |

Computer mediated collaborations (CMC) is also used to encompass asynchronous interactions through a collaborative workspace, as well as e-mail, instant messaging, and synchronous interactions using a system that incorporates desktop videoconferencing, shared workspace, chat and other features (Rice *et al.*, 2007). On the other hand extended enterprise concept in parallel with the concurrent enterprising looks for how to add value to the product by incorporating to it knowledge and expertise coming from all participants on the product value chain (Sorli *et al.*, 2006). Collaborative networked organizations (CNOs) are complex entities whose proper understanding, design, implementation, and management require the integration of different modeling perspectives (Camarinha-Matos and Afsarmanesh, 2007).

Examples of Uses of Virtual Team:

Working in today's business world is like working in a world where the sun never sets. Rezgui (2007) investigates the effectiveness of virtual teams, and any other suitable form of virtual collaboration, in the construction sector and explores the factors that influence their successful adoption. May and Carter (2001) in their case study of virtual team working in the European automotive industry have shown that enhanced communication and collaboration between geographically distributed engineers at automotive manufacturer and supplier sites make them get benefits are better quality, reduced costs and a reduction in the time-to-market (between 20% to 50%) for a new product vehicle. New product development (NPD) requires the collaboration of new product team members both within and outside the firm (Martinez-Sanchez *et al.*, 2006, McDonough *et al.*, 2001, Ozer, 2000) and NPD teams are necessary in almost all businesses (Leenders *et al.*, 2003). In addition, the pressure of globalization competition companies face increased pressures to build critical mass, reach new markets, and plug skill gaps, NPD efforts are increasingly being pursued across multiple nations through all forms of organizational arrangements (Cummings and Teng, 2003). Given the resulting differences in time zones and physical distances in such efforts, virtual NPD projects are receiving increasing attention (McDonough *et al.*, 2001). The use of virtual teams for new product development is rapidly growing and organizations can be dependent on it to sustain competitive advantage (Taifi, 2007).

On the other hand, virtuality have been presented as one solution for small and medium enterprises (SMEs) aiming to increase their competitiveness (Pihkala *et al.*, 1999). The SMEs are one of the sectors that have a strong potential to benefit from advances in ICTs and the adaptation of new business modes of operation. The combination of explosive knowledge growth and inexpensive information transfer creates a fertile soil for unlimited virtually invention (Miles *et al.*, 2000).

Benefits and Draw Back of Virtual Team:

During the last decade, words such as "virtual", "virtualization", "virtualized" have been very often advocated by scholars and practitioners in the discussion of social and economic issues (Vaccaro *et al.*, 2008) but the advantages and pitfalls of virtual team is concealed. The availability of a flexible and configurable base infrastructure is one of the main advantages of agile virtual teams. Anderson *et al.* (2007) suggest that the effective use of communication, especially during the early stages of the team's development, plays an equally important role in gaining and maintaining trust. Virtual R&D teams which members do not work at the same time or place (Stoker *et al.*, 2001) often face tight schedules and a need to start quickly and perform instantly (Munkvold and Zigurs, 2007). Virtual team may allow people to collaborate more productivity at a distance, but the tripe to coffee corner or across the hallway to a trusted colleague is still the most reliable and effective way to review and revise a new idea (Gassmann and Von Zedtwitz, 2003a). As a drawback, virtual teams are particularly vulnerable to mistrust, communication break downs, conflicts, and power struggles (Rosen *et al.*, 2007). On the other hand, virtual teams reduce time-to-market (May and Carter, 2001). Lead time or time to market has been generally admitted to be one of the most important keys for success in manufacturing companies (Sorli *et al.*, 2006). Table 3 summarizes some of the main advantages and Table 4 some of the main disadvantages associated with virtual teaming. We are in a transient phase that is pushing out beyond the envelope of team fundamentals into a space where we begin to lose track of reality (Qureshi and Vogel, 2001). Clearly the rise of network technologies has made the use of virtual teams feasible (Beranek and Martz, 2005). Finally organizational and cultural barriers are another serious impediment to the effectiveness of virtual teams. Many managers are uncomfortable with the concept of a virtual team because successful management of virtual teams may require new methods of supervision (Jarvenpaa and Leidner, 1999).

Forming and performing in virtual teams is useful for projects that require cross-functional or cross boundary skilled inputs and the key to their value creation is to have a defined strategy in place to overcome the issues highlighted, especially the time zones and cultural issues. While communication could be seen as a traditional team issue, the problem is magnified by distance, cultural diversity and language or accent

Table 3: some of the main advantages associated with virtual teaming

| Advantages | Reference |
|---|---|
| Reducing relocation time and costs, reduced travel costs (Virtual teams overcome the limitations of time, space, and organizational affiliation that traditional teams face (Piccoli <i>et al.</i> , 2004)) | (McDonough <i>et al.</i> , 2001, Rice <i>et al.</i> , 2007, Bergiel <i>et al.</i> , 2008, Cascio, 2000, Fuller <i>et al.</i> , 2006b, Kankanhalli <i>et al.</i> , 2006, Prasad and Akhilesh, 2002, Olson-Buchanan <i>et al.</i> , 2007, Boudreau <i>et al.</i> , 1998, Biuk-Aghai, 2003, Liu and Liu, 2007, Lipnack and Stamps, 2000) |
| Reducing time-to-market [Time also has an almost 1:1 correlation with cost, so cost will likewise be reduced if the time-to market is quicker (Rabelo and Jr., 2005)] | (Lipnack and Stamps, 2000, May and Carter, 2001, Sorli <i>et al.</i> , 2006, Kankanhalli <i>et al.</i> , 2006, Chen, 2008, Shachaf, 2008, Kusar <i>et al.</i> , 2004, Ge and Hu, 2008, Mulebeke and Zheng, 2006, Guniš <i>et al.</i> , 2007, Prasad and Akhilesh, 2002, Zhang <i>et al.</i> , 2004, Sridhar <i>et al.</i> , 2007) |
| Able to digitally or electronically unite experts in highly specialized fields working at great distances from each other | (Rosen <i>et al.</i> , 2007) |
| More effective R&D continuation decisions | (Cummings and Teng, 2003, Schmidt <i>et al.</i> , 2001) |
| Most effective and rapid in making decisions | (Hossain and Wigand, 2004, Paul <i>et al.</i> , 2004b, Bal and Gundry, 1999) |
| Able to tap selectively into center of excellence, using the best talent regardless of location | (Crisuolo, 2005, Cascio, 2000, Samarah <i>et al.</i> , 2007, Fuller <i>et al.</i> , 2006b, Furst <i>et al.</i> , 2004, Badrinarayanan and Arnett, 2008, Prasad and Akhilesh, 2002, Boudreau <i>et al.</i> , 1998, Boutellier <i>et al.</i> , 1998) |
| Greater degree of freedom to individuals involved with the development project | (Ojasalo, 2008, Badrinarayanan and Arnett, 2008, Prasad and Akhilesh, 2002) |
| Greater productivity, shorter development times | (McDonough <i>et al.</i> , 2001, Mulebeke and Zheng, 2006) |
| Producing better outcomes and attract better employees, Generate the greatest competitive advantage from limited resources. | (Martins <i>et al.</i> , 2004, Rice <i>et al.</i> , 2007, Chen <i>et al.</i> , 2008b) |
| Useful for projects that require cross-functional or cross boundary skilled inputs | (Lee-Kelley and Sankey, 2008) |
| On time implementation of the tasks assigned, Less resistant to change | (Precup <i>et al.</i> , 2006) |
| Integrating talent in newly industrialized | |
| Facilitating transnational innovation processes | (Gassmann and Von Zedtwitz, 2003b, Prasad and Akhilesh, 2002) |
| Higher degree of cohesion (Teams can be organized whether or not members are in proximity to one another) | (Kratzer <i>et al.</i> , 2005, Cascio, 2000, Gaudes <i>et al.</i> , 2007) |
| Evolving organizations from production-oriented to service /information-oriented, Faster response times to tasks, Providing flexible hours for the employees, More sense of responsibility is more developed | (Johnson <i>et al.</i> , 2001, Precup <i>et al.</i> , 2006) |
| Provide organizations with unprecedented level of flexibility and responsiveness | (Powell <i>et al.</i> , 2004, Hunsaker and Hunsaker, 2008, Chen, 2008, Guniš <i>et al.</i> , 2007, Prasad and Akhilesh, 2002, Pihkala <i>et al.</i> , 1999, Piccoli <i>et al.</i> , 2004, Liu and Liu, 2007) |
| Perform their work without concern of space or time constraints | (Lurey and Raisinghani, 2001) |
| Self-Assessed performance and high performance. | (Chudoba <i>et al.</i> , 2005, Poehler and Schumacher, 2007) |
| Optimize the contributions of individual members toward the completion of business tasks and organizational goal | (Samarah <i>et al.</i> , 2007) |
| Reduce the pollution, Creates and disperses improved business processes across organizations | (Johnson <i>et al.</i> , 2001) |
| The ratio of virtual R&D member publications exceeded from co-located publications | (Ahuja <i>et al.</i> , 2003) |
| The extent of informal exchange of information is minimal (virtual teams tend to be more task oriented and exchange less socio emotional information) | (Pawar and Shariif, 1997, Schmidt <i>et al.</i> , 2001) |
| Can manage the development and commercialization tasks quite well | (Chesbrough and Teece, 2002) |
| Respond quickly to changing business environments | (Bergiel <i>et al.</i> , 2008, Mulebeke and Zheng, 2006) |
| Improve communication and coordination, and encourage the mutual sharing of inter-organizational resources and competencies | (Chen <i>et al.</i> , 2008a) |
| Team communications and work reports are available online to facilitate swift responses to the demands of a global market. Employees can be assigned to multiple, concurrent teams; dynamic team membership allows people to move from one project to another. Employees can more easily accommodate both personal and professional lives | (Cascio, 2000) |
| Cultivating and managing creativity | (Leenders <i>et al.</i> , 2003, Prasad and Akhilesh, 2002, Atuahene-Gima, 2003, Badrinarayanan and Arnett, 2008) |
| Sharing knowledge, experiences; Facilitate knowledge capture | (Rosen <i>et al.</i> , 2007, Zakaria <i>et al.</i> , 2004, Furst <i>et al.</i> , 2004, Merali and Davies, 2001, Sridhar <i>et al.</i> , 2007, Lipnack and Stamps, 2000) |

Table 3: Continue

| | |
|---|---|
| Improve the detail and precision of design activities | (Vaccaro <i>et al.</i> , 2008) |
| Provide a vehicle for global collaboration and coordination of R&D-related activities | (Paul <i>et al.</i> , 2005) |
| Allow organizations to access the most qualified individuals for a particular job regardless of their location. | (Hunsaker and Hunsaker, 2008) |
| Enable organizations to respond faster to increased competition | (Hunsaker and Hunsaker, 2008, Pauleen, 2003) |
| Better team outcomes (quality, productivity, and satisfaction) | (Gaudes <i>et al.</i> , 2007, Ortiz de Guinea <i>et al.</i> , 2005, Piccoli <i>et al.</i> , 2004) |
| Higher team effectiveness and efficiency | (May and Carter, 2001, Shachaf and Hara, 2005) |
| Reduce training expenses, Faster Learning | (Pena-Mora <i>et al.</i> , 2000, Atuahene-Gima, 2003, Badrinarayanan and Arnett, 2008) |
| Greater client satisfaction | (Jain and Sobek, 2006) |

Table 4: some of the main disadvantages associated with virtual teaming

| Disadvantages | references |
|---|---|
| Sometimes requires complex technological applications | (Bergiel <i>et al.</i> , 2008, Badrinarayanan and Arnett, 2008) |
| Face-to-Face collaboration (FFC) appears to be better developing a conceptual understanding of a problem (lack of physical interaction) | (Cascio, 2000, Hossain and Wigand, 2004, Kankanhalli <i>et al.</i> , 2006, Rice <i>et al.</i> , 2007) |
| Decrease monitoring and control of activities | (Pawar and Sharifi, 1997) |
| Everything to be reinforced in a much more structured, formal process | (Lurey and Raisinghani, 2001). |
| Vulnerable to mistrust, communication break downs, conflicts, and power struggles | (Rosen <i>et al.</i> , 2007, Cascio, 2000, Kirkman <i>et al.</i> , 2002, Taifi, 2007, Baskerville and Nandhakumar, 2007) |
| Challenges of project management are more related to the distance between team members than to their cultural or language differences | (Wong and Burton, 2000, Martinez-Sanchez <i>et al.</i> , 2006, Badrinarayanan and Arnett, 2008, Jacobsa <i>et al.</i> , 2005). |
| Challenges of determining the appropriate task technology fit | (Qureshi and Vogel, 2001, Ocker and Fjermestad, 2008, Griffith <i>et al.</i> , 2003, Badrinarayanan and Arnett, 2008, Bell and Kozlowski, 2002, Pawar and Sharifi, 2000) |
| Challenges of managing conflict | (Hinds and Mortensen, 2005, Ocker and Fjermestad, 2008, Kayworth and Leidner, 2002, Piccoli <i>et al.</i> , 2004, Wong and Burton, 2000, Ramayah <i>et al.</i> , 2003) |
| Cultural and functional diversity in virtual teams lead to differences in the members' thought processes. Develop trust among the members are challenging | (Bell and Kozlowski, 2002, Griffith <i>et al.</i> , 2003, Shachaf, 2005, Jacobsa <i>et al.</i> , 2005, Paul <i>et al.</i> , 2005, Poehler and Schumacher, 2007, Kankanhalli <i>et al.</i> , 2006, Badrinarayanan and Arnett, 2008, Munkvold and Zigungs, 2007, Boutellier <i>et al.</i> , 1998) |
| Will create challenges and obstacles like technophobia (employees who are uncomfortable with computer and other telecommunications technologies) | (Johnson <i>et al.</i> , 2001) |
| Variety of practices (cultural and work process diversity) and employee mobility negatively impacted performance in virtual teams. | (Chudoba <i>et al.</i> , 2005) |
| Team members need special training and encouragement | (Ryssen and Godar, 2000) |

difficulties. For migration or similar large-scale projects, personal project management competency, appropriate use of technology and networking ability, willingness for self-management, cultural and interpersonal awareness is fundamentals of a successful virtual team (Lee-Kelley and Sankey, 2008). Thomas and Bostrom (2005) found that a technology facilitator role can be critically important to virtual team success.

Virtual and Traditional Teams:

Unlike a traditional team, a virtual team works across space, time and organizational boundaries with links strengthened by webs of communication technologies. However, many of the best practices for traditional teams are similar to those for virtual teams (Bergiel *et al.*, 2008). Virtual teams are significantly different from traditional teams. In the proverbial traditional team, the members work next to one another, while in virtual teams they work in different locations. In traditional teams the coordination of tasks is straightforward and performed by the members of the team together; in virtual teams, in contrast, tasks must be much more highly structured. Also, virtual teams rely on electronic communication, as opposed to face-to-face communication in traditional teams. Table 5 summarizes these distinctions (Kratzer *et al.*, 2005). In particular, reliance on computer-mediated communication makes virtual teams unique from traditional ones (Munkvold and Zigungs, 2007).

Kratzer *et al.* (2005) research shows that traditional R&D teams have become rare. The processes used by successful virtual teams will be different from those used in face-to-face collaborations (FFCs) (Rice *et al.*, 2007). In an innovation network resembling a “traditional” organization, the innovation process is more

Table 5: Virtual and traditional teams are usually viewed as opposites

| Fully Traditional Team | Fully Virtual Team |
|--|--|
| Team members all co-located. | Team members all in different locations. |
| Team members communicate face-to-face (i.e., synchronous and personal) | Team members communicate through asynchronous means. |
| Team members coordinate team task together, in mutual adjustment. | The team task is so highly structured that coordination by team members is rarely necessary. |

restricted by location and time. In other words, the innovation process mostly takes place within the framework of physical offices and working hours. In virtual organizations, individuals' work is not restricted by time and place, and communication is strongly facilitated by IT. Such a product development environment allows a greater degree of freedom to individuals involved with the development project (Ojasalo, 2008). Hence multinational companies (MNC) are more likely to become tightly integrated into global R&D network than smaller unit (Boeche, 2007). Distributed teams can carry out critical tasks with appropriate decision support technologies (Chen *et al.*, 2007).

Yip and Dempster, (2005) in their study realized that perhaps the most important lesson is that the internet helps companies to be both global and local at the same time. It is possible to derive the virtual teams substitute with internet. The internet can facilitate the collaboration of different people who are involved in product development, increase the speed and the quality of new product testing and validation and improve the effectiveness and the efficiency of product development and launch (Martinez-Sanchez *et al.*, 2006). Rice *et al.*, (2007) found that the adoption of formal procedures and structured processes significantly increased the effectiveness of virtual teams. (Arranz and Arroyabe, 2008) point out that geographical dimension is not a variable that impacts substantially on the typology and objectives of R&D cooperation, in contrast with the results highlighted in the literature review that they have done. Virtual teams have more effective R&D continuation decisions than face-to-face teams because virtual team has asynchronous communication and it allows for more time for digestion and reduces the pressure of group conformity (Cummings and Teng, 2003).

Physical vs. Virtual:

(Pawar and Sharifi, 1997) study of virtual versus collocated team success and classified physical teams versus virtual teams in six categories. Table 6 summarizes these differences.

Table 6: classifying physical teams versus virtual teams

| Activity | Physical teams nature | Virtual teams nature |
|---|--|---|
| Nature of interaction | opportunity to share work and non-work related information | the extent of informal exchange of information is minimal |
| Utilization of resources | Increases the opportunity for allocation and sharing of resources | each collaborating body will have to have access to similar technical and non-technical infrastructure |
| Control and accountability (over and within the project): | the project manager provides the context for ongoing monitoring of activities and events and thus enhances their ability to respond to requirements. | The collaborating bodies were accountable to the task leaders and the project coordinator who had limited authority to enforce any penalties for failure to achieve their tasks |
| Working environment | they encountered constraints accessing information and interacting with others outside the collocated team within the company | sometimes not able to share ideas or dilemmas with other partners. |
| Cultural and educational background | members of the team are likely to have similar and complementary cultural and educational background | the team members varied in their education, culture, language, time orientation and expertise |
| Technological compatibility: | situated and operating within a single organization, faces minimal incompatibility of the technological systems | compatibility between different systems in collaborating organizations ought to be negotiated at the outset |

Most likely, virtual teams will not totally replace conventional teams. Although virtual teams are and will continue to be an important and necessary type of work arrangement, they are not appropriate for all circumstances (Nemiro, 2002). Lurey and Raisinghani (2001) base on virtual teams survey in 12 separate virtual teams from eight different sponsor companies in the high technology found that, organizations choosing to implement virtual teams should focus much of their efforts in the same direction they would if they were implementing traditional, co-located teams. Hossain and Wigand (2004) conclude that ICT-enabled virtual collaboration would be effective with the existence of face-to-face communication support and would lead to higher levels of satisfaction in collaboration. Diversity in national background and culture is common in transnational and virtual teams (Staples and Zhao, 2006). Past research has found that interaction in computer-mediated communication environments is more impersonal, more task oriented, more businesslike, and less

friendly than in face-to-face settings (Schmidt *et al.*, 2001). Akgün *et al.* (2008) found that the use of ICT had a positive influence on the knowledge base team's performance.

Challenges for Virtual Team:

Virtual teams face particular challenges involving trust (Malhotra *et al.*, 2007, Bal and Teo, 2001b, Paul *et al.*, 2004b) which is a key element to build successful interactions and to overcome selfish interests, effective communication (Beranek and Martz, 2005, Dustdar, 2004) that is even more critical for success in the virtual setting (Shachaf and Hara, 2005), deadlines (Jarvenpaa and Leidner, 1999), and team cohesiveness (Dineen, 2005). While there are great advantages that come with the adoption of the virtual teams, new challenges rise with them (Precup *et al.*, 2006). Cascio (2000) declared that there are five main disadvantages to a virtual team: lack of physical interaction, loss of face-to-face synergies, lack of trust, greater concern with predictability and reliability, and lack of social interaction. In building a virtual team, all of these issues must be at least implicitly addressed in order to have an effective virtual team (Hunsaker and Hunsaker, 2008). Virtual teams are challenged because they are virtual; they exist through computer mediated communication technology rather than face-to-face interactions (Gaudes *et al.*, 2007, Hardin *et al.*, 2007). Sometimes they report to different supervisors and they function as empowered professionals who are expected to use their initiative and resources to contribute to accomplishment of the team goal (Hunsaker and Hunsaker, 2008). Fewer opportunities for informal work- and non-work-related conversations may form challenges to virtual team (Furst *et al.*, 2004). Furthermore, virtual teams member are expected to become interdependent, successfully negotiate cultural differences (Dafoulas and Macaulay, 2002, Dekker *et al.*, 2008), and accomplish their tasks through computer-mediated technology (Hunsaker and Hunsaker, 2008). The process to motivate team members may differ depending on their orientation (Paul *et al.*, 2004a).

What Is Needed for Effective Virtual Team:

A review of the literature shows the factors that impact on the effectiveness of virtual teams are still ambiguous. Many of the acknowledged challenges of effective virtual team working, focus on ensuring good communication among all members of the distributed team (Anderson *et al.*, 2007). For example, Jarvenpaa and Leidner (1999) found that regular and timely communication feedback was key to building trust and commitment in distributed teams. Lin *et al.* (2008) study indicates that social dimensional factors need to be considered early on in the virtual team creation process and are critical to the effectiveness of the team. Communication is a tool that directly influences the social dimensions of the team and in addition the performance of the team has a positive impact on satisfaction with the virtual team.

For teams moving from co-location to virtual environments, an ability to adapt and change can be a long process riddled with trial and error scenarios. This process is seen as necessary to encourage effective virtual teams (Kirkman *et al.*, 2002). Despite weak ties between virtual team members, ensuring lateral communication maybe adequate for effective virtual team performance. In terms of implementation, lateral communication in both virtual context and composition teams can be increased by reducing the hierarchical structure of the team (i.e. a flatter reporting structure and/or decentralization) and the use of enabling computer-mediated communication tools (Wong and Burton, 2000).

Malhotra and Majchrzak's (2004) study of 54 effective virtual teams found that creating a state of shared understanding about goals and objectives, task requirements and interdependencies, roles and responsibilities, and member expertise had a positive effect on output quality. As criteria, effectiveness ratings were Hertel *et al.* (2005) collected from the team managers both at the individual and at the team level. The results of the field study showed good reliability of the task work-related attributes, teamwork-related attributes, and attributes related to tele-cooperative work.

Shachaf and Hara (2005) suggests four dimensions of effective virtual team leadership:

1. Communication (the leader provides continuous feedback, engages in regular and prompt communication, and clarifies tasks);
2. Understanding (the leader is sensitive to schedules of members, appreciates their opinions and suggestions, cares about member's problems, gets to know them, and expresses a personal interest in them);
3. Role clarity (the leader clearly defines responsibilities of all members, exercises authority, and mentors virtual team members); and
4. Leadership attitude (the leader is assertive yet not too "bossy," caring, relates to members at their own levels, and maintains a consistent attitude over the life of the project).

Bal and Teo (2001c) similar to their study in (1999) by observation and interview identified 12 elements for effective virtual team working. It is illustrated in Figure 1. The Bal and Gundry (2001c, 1999) model is used as the basic framework for the discussions on topic.

Virtual Team Working: Technology Point of View:

Selection:

Simple transmission of information from point A to point B is not enough; the virtual environment presents significant challenges to effective communication (Walvoord *et al.*, 2008). Being equipped with even the most advanced technologies is not adequate to make a virtual team effective, since the internal group dynamics and external support mechanisms must also be present for a team to succeed in the virtual world (Lurey and Raisinghani, 2001). Information richness seemed to be the most important criterion for technology selection; and the greatest impediment to the effectiveness of virtual teams was the implementation of technology (Mikkola *et al.*, 2005). Virtual teams are technology-mediated groups of people from different discipline that work on common tasks (Dekker *et al.*, 2008) so the way the technology is implemented seems to make virtual teams outcome more or less likely (Anderson *et al.*, 2007). Table 7 matrix assist the virtual team facilitator choose the appropriate technology based upon the purpose of the meeting.

Table 7: Tools for virtual teams (Adopted from Thissen *et al.* (2007))

| Tool | Examples | Uses and Advantages | Immediacy | Sensory Modes |
|-----------------------------|--|--|--|--|
| Instant Messaging and Chat | <ul style="list-style-type: none"> • Yahoo Messenger • MSN Messenger • AOL Instant Messenger • Skype | <ul style="list-style-type: none"> • Instant interaction • Less intrusive than a phone call • View who is available • Low cost • Low setup effort | <ul style="list-style-type: none"> • Synchronous or asynchronous | <ul style="list-style-type: none"> • Visual • Text and limited graphics |
| Groupware / Shared Services | <ul style="list-style-type: none"> • Lotus Notes • Microsoft Exchange • Novell Groupwise | <ul style="list-style-type: none"> • Calendars • Contact Lists • Arrange meetings • Cost and setup effort vary | <ul style="list-style-type: none"> • Asynchronous | <ul style="list-style-type: none"> • Visual |
| Remote Access and Control | <ul style="list-style-type: none"> • NetMeeting • WebEx • Remote Desktop • pcAnywhere | <ul style="list-style-type: none"> • User controls a PC without being onsite • Cost varies • Setup varies | <ul style="list-style-type: none"> • Synchronous | <ul style="list-style-type: none"> • Visual • Audio • Tactile |
| Web Conferencing | <ul style="list-style-type: none"> • NetMeeting • WebEx • Meeting Space • GoToMeeting | <ul style="list-style-type: none"> • Live audio • Dynamic video • Whiteboard • Application sharing • Moderate cost and setup effort | <ul style="list-style-type: none"> • Synchronous | <ul style="list-style-type: none"> • Visual • Unlimited graphics • Optional audio |
| File Transfer | <ul style="list-style-type: none"> • File Transfer Protocol (FTP) • Collaborative Websites • Intranets | <ul style="list-style-type: none"> • Share files of any type • Cost varies • Moderate setup effort | <ul style="list-style-type: none"> • Asynchronous | <ul style="list-style-type: none"> • Varies with file content |
| Email | <ul style="list-style-type: none"> • Numerous vendors and free applications | <ul style="list-style-type: none"> • Send messages or files • Cost and setup effort vary | <ul style="list-style-type: none"> • Asynchronous | <ul style="list-style-type: none"> • Visual • Audio in attached files |

Location:

Virtual team allow organizations to access the most qualified individuals for a particular job regardless of their location and provide greater flexibility to individuals working from home or on the road (Bell and Kozlowski, 2002). Table 8 illustrates the relationship between tool, time and space in virtual teams.

Training:

Suggestions for the training of remote managers and virtual team development can be found in the literature (Hertel *et al.*, 2005). The results of Anderson *et al.* (2007) systematic lab study confirm many of the observations include explicit preparation and training for virtual teams as a way of working collaboratively. Fuller *et al.*, (2006b) results indicate that in the case of computer collective efficacy, computer training related to more advanced skills sets may be useful in building virtual team efficacy. The Hertel *et al.* (2005) suggested that the training led to increased cohesiveness and team satisfaction.

Fig. 1: Model for effective virtual team working

Table 8: Time /Space matrix (Adapted from Bouchard and Cassivi (2004))

| | Same space | Different space |
|----------------|--|---|
| Same time | Face-to-face meeting, Brainstorming, Vote, PC and projector Electronic white board, GDSS, Chat | Chat, Tele-conference, Video-conference, Liaison satellite, Audio-conference, Shared white board, Shared application |
| Synchronous | | |
| Different time | Team room, Document management system, Discussion forum, E-mail, Workflow, Project management | E-mail, Workflow, Document sharing, Discussion forum, Group agenda Cooperative hypertext and organizational memory, Version control Meeting scheduler |
| Asynchronous | | |

Security:

Virtual team working involve exchange and manipulation of sensitive information and data through the Internet, therefore security is always an important issue of concern (Bal and Teo, 2001c). Team leaders should identify the special technological and security level needs of the virtual team and their team members (Hunsaker and Hunsaker, 2008).

Virtual Team Working: People Point of View:

Team selection: Team selection is a key factor which differentiates successful teams from unsuccessful ones. Virtual teams can be designed to include the people most suited for a particular project (Bell and Kozlowski, 2002). Virtual team leaders rather than need to make sure the project is clearly defined, outcome priorities are established, and that a supportive team climate, need to select members with necessary skills (Hunsaker and Hunsaker, 2008). Selection of virtual team members is particularly difficult because of the geographical and organizational separation involved (Bal and Gundry, 1999).

Reward Structure:

The development of a fair and motivating reward system is another important issue at the beginning of virtual teamwork (Bal and Teo, 2001b, Hertel *et al.*, 2005). Virtual team performance must be recognized and rewarded (Bal and Gundry, 1999). (Lurey and Raisinghani (2001) in a survey in an effort to determine the factors that contribute to the success of a virtual team, found that reward systems ranked strongly among the external support mechanisms for virtual teams.

Meeting Training:

Comparing teams with little and extensive training, Bal and Gundry (1999) observed a significant drop in performance as both teams went live using the system. However, the latter then improved its performance at a faster rate than the former. Training is a key aspect that cannot be neglected in team building. Virtual team members require some different types of training to ordinary teams. The training includes self-managing skills, communication and meeting training, project management skills, technology training, etc. (Bal and Teo, 2001c).

Specify Objective:

While direct leadership strategies are possible in conventional teams, members of virtual teams might be managed more effectively by empowerment and by delegating managerial functions to the members (Hertel *et al.*, 2005). Such an approach changes the role of a team manager from traditional controlling into more coaching and moderating functions (Kayworth and Leidner, 2002). Virtual team leaders should identify commonalities among members early on, while focusing the team on achieving key performance objectives and providing a clear context for recognizing team success.

Virtual Team Working: Process Point of View:

Alignment:

The company's processes need to be re-aligned with the capabilities of virtual teams as opposed to face-to-face teams. This involves an understanding of the virtual team processes and the existing processes (Bal and Gundry, 1999). However, the key elements in knowledge sharing are not only the hardware and software, but also the ability and willingness of team members to actively participate in the knowledge sharing process (Rosen *et al.*, 2007).

Meeting Structure:

Proximity enables team members to engage in informal work (Furst *et al.*, 2004). Virtual team members are more likely to treat one another formally, and less likely to reciprocate requests from one another (Wong and Burton, 2000). Shin (2005) argued that lack of physical interactions and informal relationships decrease the cohesiveness of virtual teams. Formal practices and routines designed to formally structure the task, was reported to lead to higher quality output of virtual team (Massey *et al.*, 2003). The physical absence of a formal leader exacerbates lack of extrinsic motivation (Kayworth and Leidner, 2002). In virtual teams that rarely meet face-to-face, team leaders often have no choice but to implement a formal team structure. Synchronous written documents helped virtual teams overcome challenges associated with spoken language, and this enabled teams to overcome challenges associated with asynchronous and lean written communication (Shachaf, 2008).

Performance Measurement:

Work on the performance of virtual teams by Kirkman and Rosen, *et al.* (2004) demonstrates a positive correlation between empowerment and virtual team performance. High-performance teams are distinguished by passionate dedication to goals, identification and emotional bonding among team members, and a balance between unity and respect for individual differences.

Team Facilitation:

Virtual team members must have clear roles and accountabilities. Lack of visibility may cause virtual team members to feel less accountable for results, therefore explicit facilitation of teamwork takes on heightened importance for virtual teams. Temporal coordination mechanisms such as scheduling deadlines and coordinating the pace of effort are recommended to increase vigilance and accountability (Massey *et al.*, 2003).

Conclusion:

Strong business and social pressures are driving the adoption of virtual team working. This paper with a comprehensive review of literature and related resources covering the topic along with Bal and Teo (2001c), find that success in implementing virtual team working is more about processes and people than about technology. Virtual teams offer many benefits to organizations striving to handle a more demanding work environment, but also present many challenges and potential pitfalls. With comparing Table 3, with Table 4 it is clearly obvious that advantages of utilize virtual teams are far from its disadvantages so dealing with it can bring new findings. Virtual teams are a new and exciting work form with many fascinating opportunities. Due to these opportunities, virtual teamwork becomes increasingly popular in organizations.

This paper has identified and extended 12 key factors that need to be considered, and describes a methodology focused on supporting virtual team working, with a new approach that has not been specifically addressed in the existing literature. These findings provide an important step in studying how virtual team efficacy is formed and what its consequences are in the context of virtual teams. It is apparent from the literature review that significant differences are between virtual teams and co-located teams hence manager of virtual teams should not ignore these differences at their own peril. Suggestions for the training of remote managers and virtual team development can be found in the literature. Manager of virtual team should

overcome the managing conflict, cultural and functional diversity in virtual teams and mistrust among the team members

Future research would now seem to be essential for developing a comprehensive study, combining literature survey with case study in different size of companies (e.g. multinational companies and small and medium enterprises) and various types of activities (e.g. research and development and new product development). Such a study would provide an assessment what patterns, practices, or types of activities must virtual teams carry out to achieve effectiveness in the competitive environment?, How such teams should be managed? What types of process structure and technology support should be provided for facilitating such teams?, What different methods of virtual team are used today and how effective are they?, What benefits and problems arise as a consequence of the creation of virtual team? and How to make the transition from a more traditional team structure to the more distributed team structure?. These questions and many other practical questions wait for future empirical investigation.
