In the conclusion of the paper, ACER is discussed as an agency with low formal autonomy. The autonomy score had been calculated based on multiple indicators, in accordance with an approach developed by Wonka and Rittberger (2010). However, the indicators had been aggregated in an incorrect way, leading to a faulty autonomy score for ACER. The correct autonomy score for ACER is 0.69, and not 0.15 as stated in the paper (Jevnaker & Saerbeck, 2019, footnote 2 on page 67). While this does not affect the research design of the paper, the statements concerning ACER's agency autonomy in the conclusion are incorrect. The authors regret this error.
