Intermediate School Students' Participation in School Press in Kuwait

MENAWER BAYAN ALRAJEHI
Kuwait University, Kuwait

The idea of this study has been emerged from the importance of school press in enriching and enhancing the educational press, and it also contributes in detecting talents early. The researcher has conducted this study on a random sample of 360 students from intermediate school in Kuwait. The results have revealed that the majority of students in Kuwaiti schools participate in school press as they get the required encouragement from their parents to write in school press, the students also ensured that these activities do not affect their study level negatively. The results indicate that the course newspaper is the most popular activity, in which most students always participate, and the rest of students sometimes do. Also, this study has shown that; there is a significant correlation between students' participation rate in the activity of school press and their interest to read public newspapers and magazines, and that elder students have more interest to participate in school press, so, Students' participation rate in the activity of school press varies significantly depending on the gender and grade.

Keywords: School press, intermediate school, scholastic media, journalism, communication, media

School press plays an important role in enriching the educational process. It contributes in detecting talents early and to accustom students to courage speaking in the face of others. It does this role through a sense of belonging and loyalty to the homeland. As well as raising the educational attainment level of pupils through teach them how to research and read. Also the school press makes highlight the positive aspects of the school and be illuminated window and communicating loop between the school and the surrounding community (Adeli, 2010).

According to recent trends in education to pay attention to school activities and school press as a form of these activities are working to provide students with information and knowledge of the world they live. It also gives them the knowledge about the other side of world like: current events, ideas, new information about scientific discoveries and inventions, in addition to the definition of the traditions and values.

The school press is a free school activity uses various simplified easy attractive and interesting media arts, which make it popular among students and make them read introduced information through it. In this way students may be affected by school press issues which leave a clear mark on their fresh minds (Kahil, 1992). From this point, school press derives its importance as an essential component of the educational process to create a creative generation depends on self search and elicits information from multiple sources (Code, 2003).

Correspondence to: Menawer Bayan Alrajehi, Department of Mass Communication, Kuwait University, Po Box 23558, Safat 13096, Kuwait. E-mail: mnawr@yahoo.com

Also School press is known as a free activity interested in the development of the cognitive aspects of students by encouraging them to read and learn and gather information and criticism. It also cares about the emotional aspect of students through disclosure of technical talents and abilities and develops innovative side and improves their positive moral, religious, faith and patriotism principles. In addition to the motor side through the exercise of teamwork in collaboration with other school activities groups, and contact with the community outside the school walls (Mahmoud, 1996).

Another author believes that school press is "the newspapers and flyers printed or scripted or photo, published by a school grade students or a school group or even one student. This activity is under supervision and guidance of a teacher or a specialist. It should reflect –honestly through the appropriate style and acceptable editorial patterns-interests and activities of the community. Thereby contributes in forming the public opinion among students. This press should be printed regularly for more than one issue under one name (Ismail, 2004).

Other see that the school press is an educational medium dealing with events and contemporary issues related to the community, and characterized by its ability to follow the recent events and its evolutions. It contains photographs and drawings and statistics attract the attention of students and develop their way to think, including daily newspapers and irregular periodicals, and it is one of the aspects of the activity affecting the educational process and allow students opportunities to research and read more (Najedah, 1998).

In summary, the school press is a newspaper that depends on pupils or students in editing and designing in the school community and discuss its problems, under supervision of school press teachers and include all journalistic arts like news, investigations, interviews and comics.

This activity is characterized by the presence of high levels of job satisfaction among employees. A study revealed that school press teachers generally have job satisfaction about their work 100 per cent and that was more than other teachers in various specific areas (Dvorak & Phillips, 2001). While the most notable obstacles facing this activity: the lack of finance resources and technical supplies. The ambiguity in its purposes. The lack of specialist supervisors, and the absence of a specific time for students to practice this activity (Nassar, 1994).

Literature Review

As mentioned previous, school press plays a great role in enriching the educational process, and highlighting the positive aspects of the school, in addition being a contact loop between the school and the surrounding community (Adeli, 2010). School press also plays an important role in the development of social skills among students of deaf and dumb schools. The students love to work in this activity, and this is one of the most important motivations of students' participation in the school press group. Therefore the rate of participation reached 30 per cent of students in some schools (Abuallail, 2007).

Usually political events are located at the top list of school newspapers subjects (Imam, 2003). (Almetwaly, 2006) argued that school press have a high rate of reading among students. Also she has concluded that there is a significant correlation between the extent of school pupils read the newspapers and the level of religious awareness. That because of school press made an effective influence in religious awareness.

A study has found that school press -through its content- support belonging to the homeland. The exercise of students to the school press activity leads to the development of their critical thinking (Zaid, 2002). So (Najedah, 1998) recommends that the school press

should contain some political issues which contribute in the students' political socialization, and this lead to the creation of the citizen who is capable of participating in the governance of his country, as it should clarify the political concepts like belonging, motherland, citizenship, freedom, and democracy.

(Salamah, 2005) and (Mahmoud, 1996) have indicated that school press gives students gratifications related to leisure, entertainment and talk with others about the various activities. Studies have found that there is a relationship between exposure and ritual motives among school pupils to read the school press. Entertainment topics such as quizzes and cartoons help in filling out the spare time and recreation the students (Imbabi, 2007).

In addition to the above, the question of freedom of expression in the school press in the United States has received considerable attention. After three decades from the Supreme Court's decision in 1969 about granting school press its' freedom, the Court issued another decision in 1988 affirmed the right of secondary school managers to monitor the news and topics in pupils newspapers and magazines. And do not let them symmetry and exchange of views on certain moral issues. This led to a rise control of supervisors on newspapers and magazines for students in high schools (Lodge & Clik, 2001).

At a meeting of the Federation of School Press in Florida 1989, pupils classed journalism as a profession as a first choice and they see it as an exciting and useful career. The study pointed out that students who chose journalism as a profession continue to exercise it. That was from their awareness of the economic realities in their community (Dodd et al., 1990).

School Press Objects

The work to be successful, it must has a target trying to achieve. The clarity of purpose makes clear beginning of the work. It makes proceedings step accurately and leads it to desired achievements (Kahil, 1992). School press does not aim primarily to profit, as it is in case of the public press. So we find that its objectives are elevated and emanating from a sense of educational and moral responsibility (Omar, 2005).

Those goals are diverse, some regard the curricula, and some are closely related to individuals' development and their intellectual, cultural composition. While some of this objects are related to the school activity to make a strong link between home and school (Abdulghani 2006). The general guidance of united school press objects in two types: general and private objectives.

General Objectives

- (i) Develop the affiliation emotions among students
- (ii) Provide students with an appropriate general culture
- (iii) Connect the student with the local environment and the Arab society and the outside world
- (iv) Develop scientific thinking and encourage scientific innovative spirit
- (v) Teach students self-learning
- (vi) Instill the spirit of cooperative work (Kahil, 1992)
- (vii) Ensure religious values
- (viii) Attempt to make students practice democracy
- (ix) Introduce students to the most important institutions, governmental and private foundations and its services (Abdulghani, 2006)

Private objectives

- (i) Help students to get a public culture appropriate their age
- (ii) Work to instill religious, national and behavioral values
- (iii) Give students an opportunity to contribute positively in the national projects that serve the local environment
- (iv) Encourage students to continue following events in their community and all over the world (Kahil, 1992)
- (v) The practice of diverse journalistic arts (Audio and print) to achieve the following objectives:
 - Introduce students to the basic sources of information
 - Teach students how to practice the objective and constructive criticism (Hamid et al., Nd)
 - Development of student taste to aesthetic tendencies
 - Simplify the courses and presenting it in an interesting and attractive template
 - Qualify students to work as journalists (writing, photography drawing ... etc) (Shukri, 1996)
- (vi) Fill the student's vacuum-time, and entertains him by interesting articles
- (vii) Guide the student to better ways of study and collecting information
- (viii) Training students on freedom of expression and the practice the scientific thinking (Hussein & Almetwally, 2004). And this is very important for them as a natural extension of freedoms (Policinski, 2007)

In order to achieve the above objectives it has become necessary to prepare school press very well. And support school newspapers financially to help them in establish principles. Alleviating the burden, as well as administrative control, and encouraging journalist pupils to take responsibility is the key targets for these newspapers (Pedian, 1995). In light of the above objectives, the school press organizes competitions that serve the educational purposes develop pupils' personality in cognitive, technical and psychological aspects, and these competitions aim to:

- (i) Increase pupils' ability on writing for press and discover their scientific, cultural, artistic and journalistic talents.
- (ii) Establish peace democracy rules and practice of criticism and respect others' opinions, which serves students and the community in order to achieve the proper educational behavior.
- (iii) Train students on search and access to sources of information by scientific way (Ismail, 2004).

From this point, the practice of school press on a large scale and understanding of its objectives will serve the integrated educational purposes. That is why some consider that school press is an activity demonstrates the strength or weakness of the school (Hussein & Almetwally, 2004).

Methodology

This study focuses on to how much extent the intermediate school students in Kuwait in the practicing school press activity and their conviction of its importance. In addition to the type of school press which students participate in. This study seeks to reveal the reasons for participation or non-participation of intermediate school students in the school press and its relation with public interests and readings.

Sample: A random sample has been tested in this study equals to 360 students from intermediate schools in Kuwait, distributed as (i) According to gender: 180 males and 180

females, (ii) According to grade: 120 of the First grade, 120 from the Second grade and 120 from the third grade, and (iii) Number of tested schools: 12 intermediate schools, two schools from each governorate (one for boys and one for girls)

Questions

- (i) How much extent do intermediate grade students participate school press activity?
- (ii) What are the main school press issues students participate in?
- (iii) What are information resources students depend on to write for school journals?
- (iv) Why do students interest in participating school press activity?
- (v) Why don't students interest in participating school press activity?
- (vi) What are the challenges faces school press activity in Kuwait?

Hypotheses

H₁ There is a significant correlation between students' participation rate in the activity of school press and their interest to read public newspapers and magazines.

H₂ Students' participation rate in the activity of school press varies significantly depending on the gender and grade.

Data was collected by printed survey developed by the researcher. The survey consisted of 9 questions included all subjects of the research determined obviously in the aim of research. The Cronbach's alpha reliability coefficient of this scale has been 0.87. Data was collected using the developed scale. After the data obtained by the survey was analyzed using the SPSS program with the percentage, frequency, and correlation statistical analysis techniques.

Results and Discussion

The study shows most of students (91.7 per cent) participate in the school press activity and (8.3 per cent) sometimes do this. So the majority of students in Kuwaiti schools are participants in school press. This maybe related to many reasons like parents' encouragement to their sons and daughters on writing for school press, also pupils ensured on these activities don't affect their scholastic level (Altaeb, 2013).

Table 1. What are the main school press issues students participate in?

Participation extent Papers kinds	Always		Sometimes		Never	
	N	%	N	%	N	%
Course newspaper	300	83.3	60	16.7	0	0
Class newspaper	290	80.6	60	16.7	10	2.8
School activity newspaper	280	77.8	60	16.7	20	5.6
Grade newspaper	260	72.2	80	22.2	20	5.6
Activities group newspaper	250	69.4	90	25.0	20	5.6
Events newspaper	240	66.7	80	22.2	40	11.1
Paper of school press group	190	52.8	140	38.9	30	8.3
Photo newspaper	180	50.0	120	33.3	60	16.7

The results in Table 1 indicate that course newspaper is the most popular activity which students participate in. there were 83.3 per cent of students always participate in it, and 16.7 per cent sometimes do, but none never. In the second place it has been the class newspaper which 80.6 per cent of respondents have said always work for it, 16.7 per cent

sometimes do and 2.8 per cent never participate in it. Students also participate in school activity newspaper, grade newspaper, activities group newspaper, events newspaper, paper of school press group and photo newspaper in the last place. Also (Hanna, 1978) has ensured that students participate in many school newspapers.

The Internet has been the first information resource that students depend on to write for school press, there were 50 per cent of respondents have said that. At the second place with per cent 44.4 per cent of students, it was newspapers and magazines. Books also have been information resource for 22.2 per cent, but none used the radio and TV in writing for school press. This result agrees with (Altaeb, 2013) when he has figured out that magazines and internet are the most popular between students they depend on as information resources to write for school press.

Table 2. Why do students interest in participating in the school press activity?

To develop the spirit of affiliation to the school and the society.	36.1%
It teaches me how to think and solve problems.	25%
To get school activity grades.	19.4%
Training on writing press releases.	16.7%
To get new experiences.	16.7%
To develop the spirit of teamwork.	8.3%
Training on data collection.	5.6%
To express in freedom about my opinion.	5.6%

As it shown in Table 3, developing the spirit of affiliation to the school and the society was the reason make 36.1 per cent of students participate in school press. Then 25 per cent of students said that they participate in school press activities because it teaches them how to think and solve problems, and 19.4 per cent to get school activity grades. 16.7 per cent of students participate in it to get new experiences like training on writing press releases. 8.3 per cent of them involve in school press groups to develop the spirit of teamwork. Last 5.6 per cent of students participate in it as training on data collection and to express in freedom about their opinion. Hanna (1978) has found that school press contributes in developing scientific thinking between students.

Table 3. Challenges faces school press activity in Kuwait

Lack of resources.	13.9%
Lack of expert supervisors.	61.1%
Lack of dedicated halls for school press activity.	16.7%
There are no established places to hang the wallpapers on.	5.6%
There is no encouragement by the school administration.	16.7%

To assess the challenges faces school press activity in Kuwaiti schools from we asked the respondents about it, and we have found that the lack of expert supervisors came in first place with 61.1 per cent. Then the lack of dedicated halls for school press activity and the absence of encouragement by the school administration by 16.7 per cent. Also lack of resources affects the school press from 13.9 per cent of students' point. At the last only 5.6 per cent of students see that their schools don't interest in establishing specific places to hang the wallpapers on. That challenges are common face school press in many Arabic countries (Altaeb, 2013 & Najeedah, 1998).

Hypotheses Discussion

H₁: There is a significant correlation between students' participation rate in the activity of school press and their interest to read public newspapers and magazines.

Table 4. Spearman correlation between students' interest in reading public journals and their participation in school press

				Students' participation
Spearman's rho	students' interest to read public newspapers and magazines	Correlation coefficient	1.000	.853**
		Sig. (2-tailed)		.000
		N	360	360
	students' participation rate in the activity of school press	Correlation coefficient	.853**	1.000
		Sig. (2-tailed)	.000	.
		N	360	360

** . Correlation is significant at the 0.01 level (2-tailed).

The Table 4 indicates that there is a significant correlation between students' participation rate in the activity of school press and their interest to read public newspapers and magazines. As the correlation coefficient was 0.853 and this is a very strong correlation. This result is consistent with the findings of (Mansour, 2008), which have proved that the scholastic media affects the level of communicative skills of the participants, and makes them more able to follow events and what is going on around them. These findings support hypothesis H1 "students'" participation rate in the school press is positively correlated to their interest in reading "public newspapers and magazines.

H₂: Students' participation rate in the activity of school press varies significantly depending on the gender and grade.

Table 5. The effect of gender on students' participation in school press

	Gender	N	Mean	Std. deviation	Std. error Mean
Students' participation rate	Males	180	1.9444	.22970	.01712
	Females	180	1.8889	.31515	.02349
Independent Samples Test					
			Levene's test for equality of variances		
			F	Sig.	
Students' participation rate	Equal variances assumed		15.164	.000	
	Equal variances not assumed				

The Table 5 shows that there is a significant difference between students groups divided by gender with their participation rate in the activity of school press. It is noticeable that mean of males (1.9444) was more than females (1.8889), which means that males have more interest to participate in school press.

Table 6. Students' participation rate

	N	Mean	Std. deviation	Std. error	95% Confidence interval for Mean	
					Lower bound	Upper bound
1st grade	120	1.8333	.37424	.03416	1.7657	1.9010
2nd grade	120	1.9167	.27754	.02534	1.8665	1.9668
3rd grade	120	2.0000	.00000	.00000	2.0000	2.0000
Total	360	1.9167	.27677	.01459	1.8880	1.9454
Students' participation rate(ANOVA)						
	Sum of squares	Df	Mean square	F	Sig.	
Between groups	1.667	2	.833	11.516	.000	
Within groups	25.833	357	.072			
Total	27.500	359				

Table 6 shows that there is a significant difference between students in 1st, 2nd and 3rd grades with their participation rate in the activity of school press. It is noticeable that the mean of third group (3rd grade students) is the highest between three groups. This refers to elder students have more interest to participate in school press.

From the two Tables 5 and 6, we can say that the hypothesis (H₂): "Students' participation rate in the activity of school press varies significantly depending on the gender and grade" is correct.

Conclusion

The researcher has conducted this study on a random sample of 360 students from intermediate school in Kuwait. The idea of this study has been emerged from the importance of school press in enriching and enhancing the educational press, and it also contributes in detecting talents early. The researcher has been aiming to develop the emotional affiliation among students in order to develop their cooperative trends. This study is also aiming at providing students with the appropriate culture connecting them with their local and Arab community, besides, developing some values such as religion, innovation, scientific thinking, self-learning and democracy. The researcher has collected the required data using a survey applied on the subjects of the study, using the SPSS program to analyze data.

The results have revealed that the majority of students in Kuwaiti schools participate in school press as the get the required encouragement from their parents to write in school press, the students also ensured that these activities do not affect their study level negatively. The results indicate that the course newspaper is the most popular activity, in which most students always participate, and the rest of students sometimes do. On the other hand, the results indicate that most of students always participate in the class newspaper, some of them sometimes do, and very few of them never do. The students also participate in school activity newspaper, grade newspaper, activity group newspaper, events newspaper, paper of school press group and photo newspaper in the last place. The results of the study also show that the internet is the first source of information students depend on, then the newspapers and magazines come in the second place, and books are another source of information for few students, while the radio and TV are not revealed as source of information.

Also results show that the reasons why students participate in school press are, in order, as the following; to develop the spirit of affiliation, to learn how to think and solve problems, for getting school activity grades, getting new experiences like training on writing

press releases, developing the spirit of teamwork, and expressing their opinion freely. The results indicate that the challenges students face in participating in school press are, in order; the lack of expert supervisors, the lack of dedicated halls, the absence of encouragement from school administration, lack of resources, and finally the lack of interest in establishing specific places to hang the wallpapers on.

Finally, this study has shown that; there is a significant correlation between students' participation rate in the activity of school press and their interest to read newspapers and magazines, there is a significant difference between students group divided by gender as males have more interest to participate in school press than females, and that elder students have more interest to participate in school press, so, Students' participation rate in the activity of school press varies significantly depending on the gender and grade.
