Working Paper Series

of the German Data Forum (RatSWD)

The RatSWD Working Papers series was launched at the end of 2007. The online series is exclusively publishing conceptual and historical works dealing with the organization of the German statistical infrastructure and research infrastructure in the social, behavioral, and economic sciences. Papers that appear in the series deal primarily with the organization of Germany's official statistical system, government agency research, and academic research infrastructure, as well as directly with the work of the German Data Forum (RatSWD). Papers, addressing the aforementioned topics in other countries as well as supranational aspects are particularly welcome.

RatSWD Working Papers are non-exclusive, which means that there is nothing to prevent you from publishing your work in another venue as well: all papers can and should also appear in professionally, institutionally, or locally specialized journals.

The views expressed in the RatSWD Working Papers are exclusively the opinions of their authors and not those of the German Data Forum (RatSWD). Its funding organisations have not influenced the publications.

**The RatSWD Working Papers series is edited by
the chair of the German Data Forum (RatSWD):**

since 2020 Monika Jungbauer-Gans

2014–2020 Regina T. Riphahn

2009–2014 Gert G. Wagner

1. Introduction

Starting in issue 1 of volume 236 (2016), the *Jahrbücher für Nationalökonomie und Statistik / Journal of Economics and Statistics* publish a special section entitled *Data Observer*.¹ Contributions to this series describe data that can be used in empirical research in economics, and in the social sciences in general. While most of these data sets are micro data at the level of individuals, households, or firms (including linked employer-employee data sets), cross section and time series data at an aggregate level are covered as well. The purpose of the contributions to this section is to describe the information that is available in the data sets, to give examples of topics investigated with the data, and to inform readers how to access these data for their own research. The contributions are written by experts who often were in charge of collecting or building the data sets. Furthermore, papers in the series portray the research data centers and data service centers of data producing institutions that allow academic researchers to work with (mostly confidential) micro data for individuals and firms.

This note gives a short overview of the first 50 contributions to the *Data Observer* series that were published between 2016 and 2022.² 21 papers deal with data on individuals or household, 12 with data on establishments or enterprises, 2 with linked employer-employee data, 9 cover aggregate data for regions or countries, 3 look at other data, and 3 papers introduce research data centers or data service centers that provide data. Table 1 lists all contributions by the broad categories.

1 This section continues the European Data Watch series that was published in *Schmollers Jahrbuch / Journal of Applied Social Science Studies* from 2000 to 2015. For a survey of the 111 contributions to this series see Wagner (2015).

2 For an overview (in German) of the contributions published during the first five years see Wagner (2020b).
